

Steps to Create and Publish a Web Page

Step 1: Install Git on System.

Step 2: Open Command Prompt (Shortcut: Windows + R).

Type "git --version" and press Enter. (Verifies Git installation)

Step 3: Install VS code (Visual Code Studio Code).

Step 4: Install codex extension and locate the file path of
and Create a new folder in the same path and
rename your name.

Step 5: Open codex and Click new project, choose the folder
with your name.

Step 6: Now type "Create an HTML file Hello Madhumathi
in this folder. Make it look good and fancy".
Then press Enter.

Step 7: Open the New folder with your name in files. You
can see the HTML file created by AI.

Step 8: Open the New folder with your name again and ~~at~~
Click Hidden Items. Now "git" folder will be visible.
This ensures that it is connected with Git.

Step 9: Open VS code, press Control + O and choose the folder
with your name. Now your HTML code will be visible.

Step 10 : Click Terminal and type

(git config --global user.name "Madhumathi")

(git config --global user.email "madhuzlakshmi@gmail.com")

Press Enter

Step 11 : Click git icon which is top left, then Click the source control.

Step 12 : Write commit message "initial commit" and Click Commit.

Step 13 : Sign in to your GitHub account.

Step 14 : Click Publish Branch

Step 15 : Open your github account and check your repos.

There you can see the repo "Madhumathi" with the file inside.
