

# Documentation Using Markdown

Markdown:

It gives ordinary simple symbols that Github can turn into headings, lists, links, code and more.

Markdown = Signboards that guide your reader

Simple tools:

Heading

# My Project ← 1st heading

## About ← 2nd heading

### Result ← 3rd heading

Bold

**\*\* Important \*\***

Italics

*\* Notes \**

Lists:

- Hyphen (-) is used (-python)
- Also we can use numbers for ordered List

Example:

1. Create
2. Edit
3. Open

Tables :

| - Tables - || - Row - |

| - One - || - Two - |

Checklist :

- [x] Food

- [ ] Milk

Hyperlink :

[Vist GitHub](https://github.com)

Imagine :

! [Project image] (image page)

Emoji :

Use only when needed. Use suitable emojis.

Code Block :

```
python
print("Hello GitHub")
```

Fenced code keeps code separate from normal text.

Quote :

> Documentation

Use quotes for important statements.

README = the Welcome Guide.

# Student Attendance Analytics

## About

Analyze attendance data

### Features

- Calculations
- Charts
- Reports

## Author

Your Name

---

## Documentation & Reports

- Documentation - Explain how project works
- Use Manual - Explain how to use system
- Report - Present objective, methods
- Project Notes - Record decisions and information

---

## Research Notes

## Research Questions

What are we investigate?

## Source

Where did it come from?

## Funding

What did we learn?

## Meeting Notes

## Date

17 August 2026

## Team Attendance

Team members

## Decision

- Project
- Deadline

## RESPONSIBLE

Use AI for structure and clarity - not as a replacement for thinking or verification.

- Give accurate facts
- AI create a draft
- Check every claim
- Give credit to source
- Don't Copy paste
- Mention AI use
- Acknowledge AI assistance

## Build a Complete Markdown README

- ✓ Create a project file
- ✓ Add a table
- ✓ Add a code example
- ✓ Add an About section
- ✓ Add one hyperlink
- ✓ Add a checklist
- ✓ Add a feature list
- ✓ Add an image or emoji
- ✓ Add author information

Create → Format → Explain → Verify → Publish

Don't just write documentation. Make your code understandable
